We offer one of the best warranty programs in the industry and we back our products with excellent customer support, if you have questions before or during installation of this product please call Custom Dynamics® at 1(800) 382-1388.

Part Numbers:

CMBB-B (Drag P/N: 2001-0886)
 CMBB-C (Drag P/N: 2040-0989)

Package Contents:

- Cool Magic™ Billet Bullets (Pair)
- Instructions

Fitment: Universal fitment for 12VDC electrical systems.

Please read all Information below before Installation

Warning: Disconnect negative battery cable from battery; refer to owner's manual. Failure to do so may result in electrical shock, injury, or fire. Secure negative battery cable away from positive side of battery and all other positive voltage sources on vehicle.

Safety First: Always wear appropriate safety gear including safety glasses when performing any electrical work. It is highly recommended that safety glasses be worn throughout this installation process. Be sure vehicle is on level surface, secure and cool.

Important: The Cool Magic™ Billet Bullets have a sealed, watertight construction. Do not attempt to open the housing or remove the mounting stud from the housing. Doing so will compromise the seal and will no longer be watertight. Doing this or any other modification to this product will void the warranty.

Important: This product is designed and intended for use as auxiliary lighting only. It is NOT intended to replace any original equipment lighting installed on the vehicle and should not be used for that purpose. This product must be wired so that it does not interfere with any original equipment lighting.

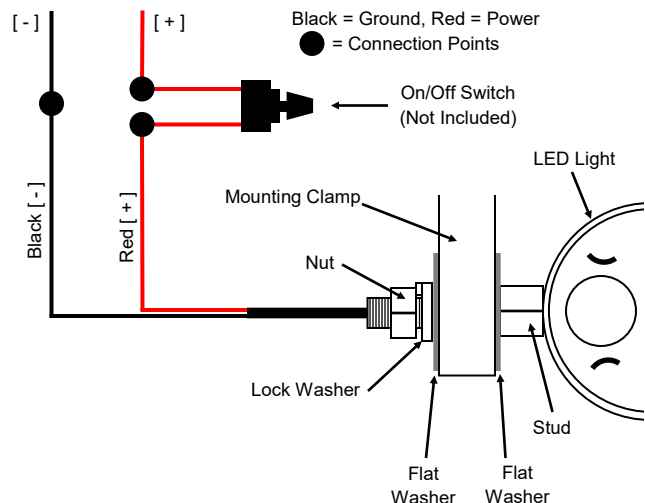

Important: Some wiring knowledge is needed for this installation. Consult your vehicle detailed service manual for wiring information and color codes. Use a meter or test light to verify wiring before tapping any vehicle wiring. If the steps contained within are beyond your skillset, do not attempt installation, contact a qualified mechanic or dealership to assist you.

Note: Mounting studs are 5/16" in diameter, please verify your mounting clamp hole before installation.

Installation

1. Determine desired place to mount the driving lights. The ideal installation is on fork tubes or engine guard by means of a mounting clamp (not included).
2. Carefully unpack Billet bullets from the package, careful to not pull any wires or damage the billet surface.
3. Before installation it is recommended to test the LEDs away from the vehicle with an independent power source such as a 9-12V battery or DC power supply to ensure product is functioning properly.
4. Guide the wires through the hardware and mounting clamp and install the mounting stud into the clamp as shown below.
5. Route wiring to the point of termination, trim any excess wire and strip ends back to solder into vehicle ground and constant power. A switch may be used to control power.
6. Reconnect the battery, then test function and adjust aim of lighting as needed. Make sure they are tight before riding.
