NOTE

Apply anti-seize to all threads prior to installation.

PROCEDURE AVERAGE TIME: 10 Minutes

STEP 1 Remove the 1/2" bolt, lock washer, and lockplate from the offset arm.

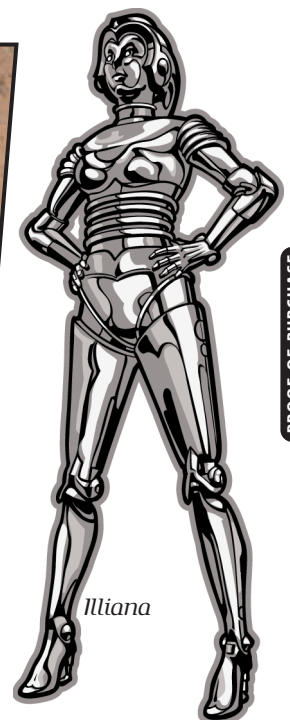

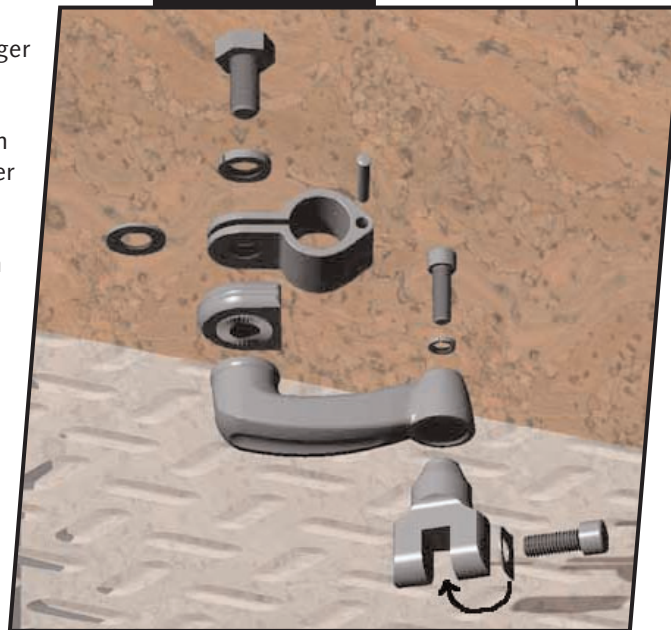

STEP 2 Place the appropriate size Magnum Quick Clamp (not included) around the tube that you choose as your mounting point. Close the quick clamp making sure the 1/8" spacer is in position between the tangs of the clamp. Lay the lockplate over the side of the clamp you are mounting the arm to as shown in FIG.1, and assemble the components in the order shown. Tighten the components only finger tight at this time.

STEP 3 Install the peg of your choice in the footpeg clevis. Be sure the "D" washer is in place in the clevis, adjacent to the pegs "male" mount to provide tension. Tighten the 3/8" pivot bolt securely with a 5/16" Allen wrench.

STEP 4 Sit on the bike and determine the optimum arm orientation. Adjust as needed and tighten securely.

STEP 5 The angle of the peg may be adjusted by loosening the 5/16" Allen bolt that secures the clevis to the arm. (Use 1/4" Allen wrench). Rotate the clevis to your desired position and tighten securely.
